Cgcr-4 protein - Chlamydomonas reinhardtii (fragment)
C;Species: Chlamydomonas reinhardtii
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 21-Jul-2000
C;Accession: S19113; S14466
R;Wakarchuk, W.w.; Mueller, F.W.; Beck, C.F.
Plant Mol. Biol. 18, 143-146, 1992
A;Title: Two GC-rich DNA elements of Chlamydomonas reinhardtii with complex arrangements A;Reference number: S19113; MUID:92119224; PMID:1731966
A;Accession: S19113
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-265 WAKA
A;Residues: 1-265 WAKA
A;Cross-references: EMBL:X17208; NID:918136; PIDN:CAA35080.1; PID:918137

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                   "Characterization of the structure and transcriptional patterns of the gene encoding the late histone subtype H1-beta of the sea urchin Strongylocentrotus purpuratus.", Mol. Cell. Biol. 8:1842-1844 (1988).
-!- FUNCTION: Histones H1 are necessary for the condensation of nucleosome chains into higher order structures.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the histone H1/H5 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              P15869;

Schwarz S., Hess D., Jost J.P.;
"The methylated DNA binding protein-2-H1 (MDBP-2-H1) consists histone H1 subtypes which are truncated at the C-terminus.";
Nucleic Acids Res. 25:5052-5056(1997).
-I- FUNCTION: Histones H1 are necessary for the condensation concleosome chains into higher order structures.
-I- SUBCELIULAR LOCATION: Nuclear.

Biochemistry 32:11345-11351(1993).

-I- FUNCTION: Histones H1 are necessary for the cond nucleosome chains into higher order structures.
-I- SUBCELLULAR LOCATION: Nuclear.
-I- SIMILARITY: Belongs to the histone H1/H5 family.
                                                                                                     MEDLINE-94032251; PubMed-8218199;

FUNCTION: Oncorhyncin II has antibacterial activity against Gram-
positive and Gram-negative bacteria at submicromolar
concentrations. Potentially important role in mucosal defense.
SUBCELLULAR LOCATION: Nuclear. Oncorhyncin II is secreted.
TISSUE SPECIFICITY: Oncorhyncin II is expressed in skin.
MASS SPECTROMETRY: MM=7195.3; METHOD=MALDI; RANGE=138-206.
MISCELLANEGUUS: Is thermostable up to 80 degrees Celsius.
SIMILARITY: Belongs to the histone H1/H5 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Histones H1 are necessary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- FUNCTION: Histone-like DNA-binding protein which is capable of
wrapping DNA to stabilize it, and thus to prevent its denaturation
under extreme environmental conditions (By similarity).
-!- SIMILARITY: Belongs to the bacterial histone-like protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Corynebacterineae; Mycobacteriaceae; Mycobacterium.
